RSA Challenge

To make it easier (Protected variables): Cry=a, N=b

Because we both have the value Cry and N we can derive these values together to solve both p and q

$$In[1]:= a = (p + 520) * (q + 520)$$
 $Out[1]:= (520 + p) (520 + q)$
 $In[2]:= Expand[a]$
 $Out[2]:= 270400 + 520p + 520q + pq$

$$ln[3]:= \mathbf{b} = \mathbf{p} * \mathbf{q}$$

Out[3]=
$$p q$$

$$ln[4]:=$$
 a = 270 400 + 520 p + 520 q + b
Out[4]= 270 400 + 520 p + 520 q + p q

We can then solve for q

$$q = (a - 520 p - b - 270400) / 520$$

Because we know that p*q=N

$$ln[9]:= b = p ((a - 520 p - b - 270 400) / 520)$$

We can then solve for p. Didn't for some reason get it to work in mathematica so used symbolab. Direct link to calculation (https://www.symbolab.com/solver/solve-for-equation-calculator/solve%20for%20p%2C%20b%20%3D%20p%5Cleft(%5Cleft(a-520p-

b-270400%5Cright)%2F520%5Cright)?or=input)

$$\ln[10] = p = -\left(\frac{-a+b+270400+\sqrt{\left(-540800a+(a-b)^2-540800b+73116160000\right)}}{1040}\right)$$

Out[10]=

$$\label{eq:hold_p} \text{Hold} \left[p \, = \, - \, \frac{-\, a \, + \, b \, + \, 270\,400 \, + \, \sqrt{-\,540\,800\,\, a \, + \, \left(\, a \, - \, b\,\right)^{\,2} \, - \, 540\,800\,\, b \, + \, 73\,116\,160\,000}}{1040} \, \right]$$

We can then extract the real values of N and Cry

In[•]:= a =

26 609 708 421 376 677 628 454 402 900 087 009 846 291 167 287 676 911 113 310 671 001 067 916 215 3 975 654 619 357 943 078 675 057 781 284 419 971 876 364 188 201 285 756 254 849 493 795 101 184 689 3 472 972 451 252 559 267 516 902 582 277 554 505 702 670 110 528 791 300 961 267 369 272 080 284 734 \times 306 320 521 513 748 467 464 633 545 459 859 474 195 548 892 296 577 923 424 451 509 458 569 436 363 3 709 731 572 253 846 238 252 647 161 985 685 432 295 738 082 766 877 396 752 019 943 012 580 636 589 3 164 644 125 010 073 946 413 108 951 305 564 059 881 537 794 476 457 602 047 138 719 485 228 161 010 % 739 405 064 157 783 241 778 448 944 470 473 298 163 156 034 126 054 406 807 297 456 937 129 548 816 3 176 179 704 045 207 131 224 909 988 357 244 665 869 859 061 263 890 702 529 905 040 557 579 134 990 3 132 844 969 289 396 259
